Module-wise Excel vs Frontend Data Gap Report

Project workbook fields compared against current frontend UI support

Method

Compared the current frontend UI/forms in /Users/albertfredy/elli-ui/src/modules/project with the Excel workbook sections under /Users/albertfredy/Downloads/CF Project Files v3. The report is organized module-wise so each module can be discussed separately with the client and developers.

1. Project Module

Frontend support: Project Name, Description, Job Number, Fieldwire Project, Project Stage, Project Status, GC, Lead PM, Address, Contract Number, Contract Type, Division, Payment Terms, Contract Value, Retainage %, Target Budget %, Tax Rate %, Estimated Start/End, Set Inactive Date, TCO Date, Actual Start/Completion, Contract Documents.

Excel fields: Project_Name, Project_Number, GC_Name, GC_Contact, Address, Start_Date, End_Date, Stage. Prime contract sheet also contains Contract_ID, Original_Contract_Value, Payment Terms, Contract document links, schedule document links.

Frontend field/group	Excel field/value + example	Problem	Client should add/fix	Developer should add/support
Project Name	Project_Name Example: P.S. 512Q in CF- PS 512Q..v3.xlsx	Supported in frontend and present in Excel.	Keep as-is.	No frontend change needed.
Description	No PROJECT sheet field Example: Frontend requires Description, but Excel only has Project_Name/Address/GC fields.	Cannot create a complete project from Excel without inventing description.	Add Project Description column.	Importer should require description or generate with visible warning.
Job Number	Project_Number Example: 32000 for P.S. 512Q	Supported in frontend and present in Excel.	Keep Project_Number mandatory.	No frontend change needed.
Project Stage	Stage Example: Brooklyn Public Library - CP2 has Stage = Submitals; P.S. 512Q has Stage blank.	Excel has typo/blank values. Frontend expects selected lookup stage.	Use fixed dropdown values: ONBOARDING, SUBMITTALS, FABRICATION, INSTALLATION, CLOSEOUT.	Normalize/validate stage values before import.
Project Status	No PROJECT sheet field Example: Frontend has project status; Excel has no project status column.	Status must be defaulted or manually chosen.	Add Project Status column if client wants status preserved.	Importer should default only with warning or require value.
GC	GC_Name, GC_Contact Example: P.S. 512Q has GC_Name = MPCC Corp.; GC_Contact = Fred Lalezarian.	GC name exists, but GC_Contact is sometimes name/email mixed and not structured.	Split GC contact into name/email/phone columns.	Map GC contact data to contact records, not only project text.
Lead PM	No PROJECT sheet field Example: Frontend requires Lead PM; Excel has no Lead PM.	Cannot know project owner/PM from Excel.	Add Lead PM column or confirm default PM rule.	Importer must require/default Lead PM with warning.
Address	Address Example: P.S. 512Q address = 81 Rockdale Avenue New Rochelle NY 10801; some others include commas.	Frontend stores street/city/state/zip separately; Excel address is a single inconsistent string.	Use separate Street, City, State, Zip columns.	Importer should parse and flag unparseable addresses.
Contract Number	Contract_ID Example: Turkish Air has Contract_ID = 4861-007S.	Field exists but is in PRIME_CONTRACTS sheet, not PROJECT sheet.	Keep Contract ID in contract sheet or mirror into project sheet.	Importer must join project + prime contract sheet.
Division	No reliable PROJECT sheet field Example: Frontend requires Contract Category / Division. Excel does not provide this directly.	Frontend requires a field not present in Excel.	Add Division/Contract Category column.	Fix frontend division lookup; currently useDivisionsQuery reads GC_TYPE, not PROJECT_DIVISION.
Payment Terms	Payment_Terms in PRIME_CONTRACTS Example: Turkish Air payment terms = 60.	Exists but is numeric/string, frontend expects enum like NET_60.	Use NET_15/NET_30/NET_45/NET_60/NET_90/DUE_ON_RECEIPT.	Normalize payment terms.

Frontend field/group	Excel field/value + example	Problem	Client should add/fix	Developer should add/support
Contract Value	Original_Contract_Value Example: Turkish Air has 1118850.	Supported but stored in prime contract sheet.	Keep value complete for every contract row.	Importer must join contract value into project financials.
Retainage %, Target Budget %, Tax Rate %	No project-level fields Example: Excel project/prime contract sheet does not contain these frontend fields.	Frontend can store them but Excel cannot provide them.	Add retainage, target budget, and tax rate columns if required.	Importer should default only with warning.
Estimated Start/End	Start_Date, End_Date Example: P.S. 512Q has both blank.	Frontend supports dates; Excel has missing values.	Make dates mandatory or mark TBD explicitly.	Importer should produce validation issue for blanks.
TCO Date	No direct PROJECT sheet field Example: Frontend requires TCO Date; Excel has End_Date only.	Frontend required field not explicitly present in Excel.	Add TCO Date column or confirm End_Date should be TCO Date.	Importer should map only by approved rule.
Actual Start/Completion	No direct Excel fields Example: Frontend shows these fields, but submit payload currently does not include them.	Both sides incomplete: Excel lacks fields and frontend does not persist them.	Add Actual Start Date and Actual Completion Date if needed.	Wire actualStartDate/actualCompletionDate through frontend payload/backend.
Contract Documents	Contract Document Link, Contract Scheduled Document Link Example: Turkish Air has Dropbox contract and schedule links.	Excel has links; frontend supports contract document upload, but URLs need import handling.	Ensure every document link is downloadable.	Importer should create/link external documents or upload files.

2. Prime Contract / GC Contact Module

Frontend support: Contract number/value/type/payment terms on project form; contract documents; GC and contact directory modules.

Excel fields: Contract_ID, GC_Name, GC_Contact_Name, GC_Contact_Email, GC_Contact_Phone, Original_Contract_Value, Start_Date, End_Date, Payment_Terms, Contract Document Link, Contract Scheduled Document Link.

Frontend field/group	Excel field/value + example	Problem	Client should add/fix	Developer should add/support
Prime Contract record	Contract_ID + Original_Contract_Value Example: Turkish Air: Contract_ID 4861-007S, value 1118850.	Can map to project contract fields, but Excel sheet may contain contact-only rows too.	Separate actual contracts from contacts.	Importer should ignore contact-only rows as contracts.
GC contacts	GC_Contact_Name/Email/Phone Example: Creedmoor row: Ana Hermsdorf, ahermsdorf@prisdev.com, phone 974 882 1133 with no contract ID.	Contact-only rows are mixed inside prime contract sheet.	Move contacts to a GC Contacts sheet or add Row Type.	Support multiple contacts linked to GC/project.
Contract schedule	Contract Scheduled Document Link Example: Some projects have link, PS 508Q has schedule link missing.	Schedule document cannot be attached when link is blank.	Provide schedule link or mark Not Available.	Importer should flag missing schedule link.

3. RFQ Module

Frontend support: RFQ title, description, bid deadline, track/type, deliverables, unit, attachments, vendor invites/quotes, award flow, create PO from awarded RFQ.

Excel fields: RFQ_ID, Title, Vendor, Status, Final_Amount, Issued Date; RFQ line item Item/Unit/Qty/Unit_Price; attachment Document_Name/Document_Link.

Frontend field/group	Excel field/value + example	Problem	Client should add/fix	Developer should add/support
RFQ ID / Number	RFQ_ID Example: Creedmoor: RFQ-2025-1562.	Present and useful.	Keep mandatory.	Map to rfqNumber.
Title	Title Example: RFQ-2025-1562 title = Corian Adhesive Tubes.	Present.	Keep mandatory.	No frontend change.
Description	No RFQ description field Example: Frontend requires Description; Excel does not provide it.	Required UI field missing from Excel.	Add RFQ Description column.	Importer should require/flag missing description.
Track / Type	No RFQ type/track field Example: Frontend requires Track (Type); Excel has Vendor and Title only.	Required UI field missing.	Add RFQ Type/Track column.	Importer should not guess trade without warning.
Bid Deadline	No Bid Deadline field Example: Excel has Issued Date but often blank.	Frontend requires Bid Deadline; Excel cannot provide it.	Add Bid Deadline column.	Importer validation required.
Issued Date	Issued Date Example: RFQ-2025-1562 has Issued Date blank.	Excel field exists but values are mostly blank; frontend form does not show Issued Date.	Complete Issued Date if it matters.	Add/display issued date or store as import metadata.
RFQ Status	Status Example: RFQ-2025-1562 Status blank.	Excel status incomplete; frontend workflow has Draft/Published/Awarded/Void logic.	Use DRAFT/PUBLISHED/AWARDED/VOID.	Map status carefully to workflow state.
Vendor	Vendor Example: Turkish Air RFQ-2025-1644 Vendor = Multiple.	Frontend supports vendor invites/quotes, but Multiple is not a vendor.	Use one vendor per row or RFQ Vendor Quotes sheet.	Import vendor quotes/invites from normalized rows.
Final Amount	Final_Amount Example: RFQ-2025-1562 Final_Amount blank.	Excel has field but blanks; frontend treats amount as quote/award data.	Fill final/award amount where awarded.	Map to awarded amount or quote amount based on status.
Deliverable Item/Qty/Unit	RFQ_LINE_ITEMS Item, Qty, Unit Example: RFQ lines exist; some Unit values blank.	Frontend requires unit for deliverables.	Complete Unit for every RFQ line item.	Importer should flag missing unit.
Deliverable Unit Price	RFQ_LINE_ITEMS Unit_Price Example: Excel has Unit_Price, but frontend RFQ form hides unit price.	Value may be lost in UI unless mapped to estimate/quote.	Clarify if Unit_Price is estimate or vendor quote.	Expose/import estimated unit price or quote line price.
RFQ Attachments	Document_Name, Document_Link Example: Creedmoor RFQ attachment row has both blank.	Frontend supports RFQ attachments, but Excel gives no file.	Provide document name and downloadable link.	Import should flag blank attachment rows.

4. Purchase Order Module

Frontend support: Vendor, trade category, linked RFQ, description, expected delivery date, payment terms, tax, line items with unit/cost code/unit price, backup documents, linked invoices/SCOs.

Excel fields: PO_ID, Linked_RFQ_ID, Issue_Date, Status, Vendor, Trade, PO_Amount, Tax_Rate, Expected_Date, Delivery_Date, Payment_Terms, Lead_Time, Ship_To, Notes, Created_By, Document_Link; line items Item/Qty/Unit/Unit_Price/Price.

Frontend field/group	Excel field/value + example	Problem	Client should add/fix	Developer should add/support
PO Number	PO_ID Example: Brooklyn Animal PO_ID = 23108.	Present.	Keep mandatory.	Map to poNumber.
Vendor	Vendor Example: PO 23108 Vendor = McLine Studios.	Present.	Keep mandatory.	No frontend change.
Linked RFQ	Linked_RFQ_ID Example: Turkish Air PO 25969 linked to RFQ 1643.	Frontend supports Linked RFQ optional.	Use full RFQ ID/number consistently.	Importer should map numeric 1643 to RFQ record.
Trade Category	Trade Example: PO 25969 Trade = Civil.	Frontend supports trade category, but app trade categories may not match free text.	Use controlled trade list matching app lookups.	Normalize or flag unknown trade.
Status	Status Example: Excel uses OPEN/CLOSED; frontend schema uses DRAFT/ISSUED/DELIVERED/CANCELLED plus paid display states.	Status values do not match.	Use app-approved PO statuses or provide mapping rules.	Map OPEN to ISSUED and CLOSED to DELIVERED only if approved.
Issue Date / Created By	Issue_Date, Created_By Example: PO 25969 Issue_Date = 2025-08-25, Created_By = Tomasz.	Excel has fields, but frontend PO form does not expose issue date/created by as editable form fields.	Keep these columns if audit history matters.	Add import/preserve issue date and created by.
Expected / Delivery Date	Expected_Date, Delivery_Date Example: PO 25969 Delivery_Date = 2026-03-04, Expected_Date blank.	Frontend supports expected date and delivery status handling; Excel often has one date missing.	Complete both dates if known.	Importer should map delivery date to delivered state only by rule.
Tax Rate	Tax_Rate Example: PO 23108 Tax_Rate blank; tax rate blank in most PO rows.	Frontend supports tax percent, Excel mostly missing.	Complete tax rate or mark tax exempt.	Importer should distinguish blank from zero tax.
Payment Terms	Payment_Terms Example: Many PO rows blank.	Frontend requires payment terms.	Complete payment terms using NET_30 etc.	Importer should default only with warning.
Backup Document	Document_Link Example: PO 23108 Document_Link blank.	Frontend supports backup documents; Excel lacks links.	Provide downloadable PO document links.	Importer should skip/flag blank links.
Line Item Unit	Unit Example: PO 23108 line item Unit blank.	Frontend requires unit for line item.	Complete Unit for every PO line.	Importer should flag blank unit.
Line Item Cost Code	No PO line item cost code field Example: Frontend PO line item requires Cost Code; Excel has no Cost_Code column.	Frontend-required line item field missing from Excel.	Add Cost Code column to PO_LINE_ITEMS.	Make cost code importable or allow explicit import default.
Line Item Qty/Price	Qty, Unit_Price, Price Example: Eastern Library PO 26054 line has Qty, Unit, Unit_Price, Price blank.	Frontend requires positive quantity and unit price.	Complete numeric values.	Importer should block incomplete lines.

5. PO Payments / Invoice Module

Frontend support: Invoice Number, Invoice Date, Due Date, Purchase Order, Vendor, Total Amount, Tax Rate/Amount, notes, attachments, mark paid with Paid Date, Payment Method, Payment Reference, Payment Notes.

Excel fields: PO_ID, Date, CHK#, Note, Amount.

Frontend field/group	Excel field/value + example	Problem	Client should add/fix	Developer should add/support
Invoice Number	No field Example: PO_PAYMENTS has no invoice number.	Frontend invoice create requires invoice number.	Add Invoice Number column.	Importer should generate only with visible warning if missing.
Invoice Date / Due Date	Date only Example: Payment row Date = 2025-08-21 for BPL PO 25353; no due date.	Excel date may be payment date, not invoice date/due date.	Add Invoice Date, Due Date, Paid Date separately.	Importer must not treat payment date as all dates without rule.
Payment Reference	CHK# Example: BPL PO 25353 payment has CHK# blank.	Frontend supports payment reference but Excel sometimes blank.	Make CHK#/reference mandatory for paid rows.	Importer should allow blank only if payment method supports it.
Payment Method	No field Example: Excel payment rows do not identify ACH/check/card/etc.	Frontend mark-paid requires payment method.	Add Payment Method column.	Importer should map to payment method lookup.
Tax	No payment tax fields Example: Frontend invoice has tax rate and tax amount.	Tax cannot be recreated from Excel payments.	Add tax rate/amount or mark no tax.	Importer should calculate only by approved rule.
Payment Attachment	No document link Example: No payment backup link in PO_PAYMENTS.	Frontend invoice supports attachments but Excel gives none.	Add Payment/Invoice Document Link.	Importer should attach file when provided.
Amount	Amount Example: P.S. 512Q blank payment row has Amount blank.	Frontend requires positive invoice amount.	Remove blank rows and complete Amount.	Importer should block blank amount rows.

6. Prime Change Order Module

Frontend support: Prime CO list, status filters, financial summary, Fieldwire sync status. Schema expects Fieldwire IDs, revision IDs, sync timestamps, creator/assignee Fieldwire users.

Excel fields: CO_ID, Name, Description, Status, Amount, Reason, Schedule_Impact_Days, Markup_Pct, Total_CO_Amount, Creator, Assignee, Due_Date, Approval_Date, Document_Link; line items Category/Cost_Code/Item/Qty/Unit_Type/Unit_Price/Price.

Frontend field/group	Excel field/value + example	Problem	Client should add/fix	Developer should add/support
Manual Prime CO	PRIME_COs rows Example: BPL CO 30400-0001 exists in Excel.	Frontend Prime CO module is not a normal create/edit form; it is Fieldwire sync-oriented.	Confirm whether Excel Prime COs are manual/imported COs or Fieldwire exports.	Add manual/imported Prime CO support separate from Fieldwire sync.
CO Name	Name Example: BPL CO 30400-0001 Name blank.	Frontend/detail needs name; Excel may be blank.	Make Name mandatory.	Importer should fall back only with warning.
Status	Status Example: BPL CO status = Approved.	Frontend supports Prime CO status labels, but status text must match controlled list.	Use Draft/Requested/Pending Revision/Pending Approval/Approved/Rejected/Void.	Normalize status.
Reason/Creator/Assignee	Reason, Creator, Assignee Example: BPL CO 30400-0001 has Reason, Creator, Assignee blank.	Important workflow/audit fields missing.	Complete these fields if required for approval history.	Add fields/import support outside Fieldwire user IDs.
Schedule Impact	Schedule_Impact_Days Example: Column exists but often blank.	Frontend has schedule impact filters, Excel values incomplete.	Complete days or mark none.	Map days and schedule impact status.
Document Link	Document_Link Example: BPL CO 30400-0001 Document_Link blank.	No attachment can be recreated.	Provide document links.	Add Prime CO attachment support.
Prime CO Line Items	PRIME_CO_LINE_ITEMS Example: 12 line item rows exist across workbooks.	Frontend has no visible Prime CO line-item create/edit UI.	Keep line item sheet complete.	Add Prime CO line-item model/UI if reporting is required.

7. PO Change Order / Sub Change Order Module

Frontend support: Purchase Order, Date, Change Type, Title, Description, line items with unit/cost code/unit price, negotiated discount, shipping/handling, tax, documents, approve/reject/void workflow.

Excel fields: PO_ID, PO_CO_ID, Name, Description, Status, Amount, Reason, Schedule_Impact_Days, Markup_Pct, Creator, Assignee, Due_Date, Approval_Date, Document_Link; line items Category/Cost_Code/Item/Qty/Unit_Type/Unit_Price/Price.

Frontend field/group	Excel field/value + example	Problem	Client should add/fix	Developer should add/support
SCO Number	PO_CO_ID Example: Eastern Library PO_CO_ID = 25783-01.	Present.	Keep mandatory.	Map to SCO number.
Purchase Order Link	PO_ID Example: Eastern Library SCO references PO 25783.	Frontend requires purchase order.	Keep PO_ID mandatory.	Importer should block SCO if PO missing.
Date	Due_Date / Approval_Date Example: Eastern Library SCO has Due_Date 2025-11-07, Approval_Date blank.	Frontend has one Date field; Excel has due and approval dates.	Add explicit SCO Date or clarify which date maps to frontend Date.	Add due date field or approved mapping rule.
Change Type	No direct field; Reason exists Example: Frontend requires Change Type; Excel has Reason blank often.	Required frontend field missing from Excel.	Add Change Type column.	Importer should require/default with warning.
Title / Description	Name, Description Example: Eastern Library name = CO for WW Shop Drawings.	Present.	Keep mandatory.	No major frontend change.
Status	Status Example: Eastern Library 25783-01 Status blank.	Frontend workflow has DRAFT/APPROVED/REJECTED/VOID.	Complete status using fixed values.	Importer should map/flag blank status.
Reason	Reason Example: Many rows blank.	Frontend detail has reasonForChange concept, but form does not expose it as separate field.	Complete Reason if needed.	Add reason field to form/import.
Schedule Impact Days	Schedule_Impact_Days Example: Column exists but often blank.	Frontend SCO form does not expose schedule impact days.	Complete or mark none.	Add schedule impact days field if business wants it.
Markup %	Markup_Pct Example: Column exists but often blank.	Frontend has discount/shipping/tax, not markup % as first-class field.	Complete markup if used.	Add markup percent support or decide not used.
Creator / Assignee	Creator, Assignee Example: Often blank.	Frontend does not have creator/assignee form fields.	Complete if audit/ownership needed.	Add import metadata/assignee fields.
Document Link	Document_Link Example: Eastern Library 25783-01 Document_Link blank.	Frontend supports SCO documents, Excel lacks link.	Provide document links.	Importer should flag blank document links.
Line Item Cost Code	Cost_Code Example: PO_CO_LINE_ITEMS has Cost_Code, sometimes em dash.	Frontend line items support costCodeId.	Use valid cost code values, not em dash.	Map cost code text to catalog IDs.

8. Files / Attachments Cross-module

Frontend support: Project contract documents, RFQ attachments, PO backup documents, invoice attachments, SCO documents. Prime CO attachments are not clearly supported in current frontend.

Excel fields: Contract Document Link, Contract Scheduled Document Link, RFQ Document_Link, PO Document_Link, PO CO Document_Link, Prime CO Document_Link. Payment attachment link is missing.

Frontend field/group	Excel field/value + example	Problem	Client should add/fix	Developer should add/support
Project contract docs	Contract Document Link Example: Turkish Air has contract Dropbox link.	Works if link is downloadable.	Keep downloadable links.	Importer should support external URLs.
RFQ docs	RFQ_ATTACHMENTS Document_Link Example: Creedmoor RFQ attachment row blank.	Frontend supports RFQ docs but no link exists.	Add links.	Flag blank attachment rows.
PO docs	PURCHASE_ORDERS Document_Link Example: PO 23108 Document_Link blank.	Frontend supports PO backup documents.	Add links.	Import/link PO documents.
Invoice/payment docs	No PO_PAYMENTS document link Example: Payment rows have no file link.	Frontend supports invoice attachments but Excel cannot provide them.	Add Payment/Invoice Document Link.	Import invoice attachments.
Prime CO docs	PRIME_COs Document_Link Example: BPL CO 30400-0001 Document_Link blank.	Frontend Prime CO attachments not clearly available.	Add links where docs exist.	Add Prime CO attachment support.

Main Client Template Changes

Add frontend-required fields missing from Excel: Project Description, Lead PM, Project Status, Division, TCO Date, RFQ Description, RFQ Type/Track, RFQ Bid Deadline, PO/SCO Cost Codes, Invoice Number, Invoice Date, Due Date, Payment Method, and payment/invoice document links.

Use controlled dropdown values for Project Stage, RFQ Status, PO Status, Prime CO Status, PO CO/SCO Status, Payment Terms, Units, Trade Category, Division, and Change Type.

Separate GC contacts from Prime Contracts, or add Row Type so contacts are not treated as contracts.

Provide downloadable links for every attachment row.

Remove blank rows from PO, payment, RFQ attachment, and change order sheets.

Main Developer Changes

Fix frontend Project Division lookup to use project division data, not GC_TYPE.

Persist Actual Start Date and Actual Completion Date if they remain visible in the Project form.

Add/import validation report showing missing required frontend fields by workbook/sheet/row.

Add manual/imported Prime CO support if Excel Prime COs are not Fieldwire records.

Add/support Prime CO line items and Prime CO attachments.

Add RFQ issued date/final amount/imported status support or define where these values belong.

Add payment import strategy: either simple payment records or invoice mapping with generated invoice numbers and warnings.

Add SCO fields for reason, due date, schedule impact days, markup %, creator, assignee, and approval date if those Excel columns must be preserved.
