QuickBooks Integration Test Report

Generated June 11, 2026 at 03:49 PM. This simplified report combines mocked backend tests and live QuickBooks sandbox CDC tests.

Mocked backend tests	33 pass, 0 fail
Live sandbox CDC/mutation tests	8 pass, 0 fail
Combined executed tests	41 pass, 0 fail
Latest local synced counts	19 bank accounts, 66 line item categories, 911 vendors/payees

Test Results

Suite	Test	Description	Status
Mocked	Token encryption/decryption	Verifies stored QuickBooks tokens encrypt/decrypt and raw values are not exposed.	PASS
Mocked	Invalid token handling	Rejects empty or malformed encrypted token strings.	PASS
Mocked	Missing config detection	Reports missing QuickBooks env config and sandbox defaults.	PASS
Mocked	Production config detection	Uses production API base URL and custom minor version when configured.	PASS
Mocked	Authorization URL	Builds Intuit OAuth URL with client id, scope, redirect URI, and state.	PASS
Mocked	Authorization code exchange	Normalizes Intuit token response and sends Basic Auth/form encoding.	PASS
Mocked	Refresh and revoke endpoints	Calls Intuit OAuth refresh and revoke endpoints correctly.	PASS
Mocked	Query and CDC parsing	Extracts valid Account/Vendor rows and ignores invalid rows.	PASS
Mocked	Company info fallback	Uses CompanyName, then LegalName fallback.	PASS
Mocked	Rate limit retry	Retries a 429 response using retry-after.	PASS
Mocked	Valid token reuse	Returns current access token when not close to expiry.	PASS
Mocked	Expiring token refresh	Refreshes expiring token and stores encrypted replacements.	PASS
Mocked	Revoked authorization	Marks connection disconnected on invalid_grant.	PASS
Mocked	Connection status	Returns configured status and token health for active connection.	PASS
Mocked	OAuth state creation	Creates OAuth state and returns authorization URL.	PASS
Mocked	Callback error paths	Handles callback error, missing code/realm, and invalid state.	PASS
Mocked	Successful OAuth callback	Stores connection, company, encrypted tokens, and disconnects other realms.	PASS
Mocked	Disconnect cleanup	Cleans local connection even if Intuit revoke fails.	PASS
Mocked	Disconnect without connection	Returns disconnected=false and avoids external calls.	PASS
Mocked	Disconnect callback	Marks matching realm disconnected and redirects.	PASS
Mocked	includeInactive query parsing	Parses undefined/false/true query values.	PASS
Mocked	Public OAuth callback route	Returns 302 redirect back to frontend settings.	PASS
Mocked	Public disconnect callback route	Returns 302 redirect to disconnected page.	PASS

Suite	Test	Description	Status
Mocked	Reference sync status	Returns disconnected and connected sync dashboard states.	PASS
Mocked	Reference lists	Lists bank accounts, categories, and vendors/payees.	PASS
Mocked	includeInactive list query	Passes includeInactive through to Prisma list queries.	PASS
Mocked	No connection errors	Throws for list/sync operations when QuickBooks is not connected.	PASS
Mocked	Auto daily sync toggle	Updates referenceAutoSyncEnabled flag.	PASS
Mocked	Full reference sync	Maps Account to bank/category and Vendor to payee.	PASS
Mocked	CDC inactive/deleted rows	Updates inactive/deleted bank/category/vendor records locally.	PASS
Mocked	Partial CDC failure	Records PARTIAL when one CDC entity fails and others succeed.	PASS
Mocked	Sync lock contention	Rejects manual sync when another reference sync is running.	PASS
Mocked	Scheduled skip	Skips scheduled sync when auto sync is disabled.	PASS
Live	Company info	Reads company info from connected QuickBooks sandbox company.	PASS
Live	Backend status	Reads connected sandbox status from stored DB connection.	PASS
Live	Bank account query	Queries live Account records without mutating data.	PASS
Live	Vendor query	Queries live Vendor records without mutating data.	PASS
Live	Read-only CDC	Runs CDC for Account and Vendor entities.	PASS
Live	Backend live sync	Runs backend reference sync with stored DB token.	PASS
Live	Local synced lists	Lists locally synced bank/category/vendor records after sync.	PASS
Live	CDC edit/delete mutations	Creates disposable sandbox records, edits/deactivates bank/category/vendor, verifies CDC and local sync capture them.	PASS

Failures

None. All mocked and live sandbox test cases passed.

Soft Delete / Hard Delete Check

QuickBooks reference tables do not use an isDeleted column. They use active and deletedAt. For QuickBooksBankAccount and QuickBooksLineItemCategory, deleted/status=Deleted records are updated with active=false and deletedAt set; Active=false records are kept with active=false. For QuickBooksPayee, records are updated with active=false and deletedAt only when QuickBooks sends status=Deleted. I found no hard delete calls for QuickBooksBankAccount, QuickBooksLineItemCategory, or QuickBooksPayee. delete/deleteMany is only used for OAuth state cleanup and sync locks, not synced reference data.

More Cases Worth Testing Later

• Token expires halfway through a live sync and refresh succeeds.

• Token refresh fails during live sync and connection is marked disconnected.

• QuickBooks returns 429 during live sync, not only client unit query.

• CDC watermark older than 29 days forces full sync in a live DB scenario.

• Duplicate disposable names in sandbox produce a clear test/setup error.

• QuickBooks webhook event, if implemented later, triggers the same reference sync path.

• Multiple connected realms are prevented or the newest active realm is consistently selected.
