Project Excel Data Inconsistency Report

Excel cleanup requirements and frontend/app field gaps

Scope

Reviewed 11 project Excel workbooks from /Users/albertfredy/Downloads/CF Project Files v3 and frontend project modules in /Users/albertfredy/elli-ui/src/modules/project. This report focuses on what is present in Excel, what the frontend currently supports, and what must be fixed to recreate the Excel data accurately.

Data Present in Excel

Data Type	Rows
Projects	11
Prime contract/contact rows	16
Purchase Orders	40
PO line items	84
PO payments	62
RFQs	14
RFQ line items	22
RFQ attachment rows	14
Prime Change Orders	12
Prime CO line items	12
PO Change Orders / SCOs	6
PO CO line items	6

Excel vs Frontend Support

Area	Frontend currently supports	Gap / risk
Project	Project name/number, GC, address, estimated dates, stage, division, contract number/value, retainage, tax, payment terms, TCO, contract upload.	Actual Start/Completion shown but not submitted; division lookup uses GC_TYPE; Excel lacks required Description/TCO in some cases.
Prime Contract / GC Contacts	Project contract document upload and GC/contact directory exist.	Excel mixes contact-only rows into contract sheet; no clear frontend project-level multiple-contract/contact import flow.
RFQ	RFQ list/detail/create, bid deadline, type/track, deliverables, attachments, vendors/quotes, award/create PO flow.	Excel lacks description/type/bid deadline; frontend lacks issued date as form field; final amount is award/quote data, not simple RFQ header data.
Purchase Order	Linked RFQ, vendor, trade, expected date, tax, payment terms, line items, cost codes, backup documents, linked invoices/SCOs.	Excel lacks many cost codes/units; PO form does not directly capture Created By/Issue Date/Status as Excel columns.
PO Payments / Invoices	Invoice module supports invoice number/date/due date, amount, tax, paid status, payment reference/method, attachments.	Excel payment tab lacks invoice number, due date, payment method, tax fields, and payment attachments.

Area	Frontend currently supports	Gap / risk
Prime Change Orders	Prime CO list, filters, summaries, Fieldwire sync status.	No manual Excel-style create/edit form; no line-item or attachment UI for imported Prime CO rows.
PO Change Orders / SCOs	SCO list/detail/create, purchase order link, date, title, description, change type, line items, attachments, approve/reject/void flow.	Excel reason, schedule impact days, markup %, creator, assignee, due date, approval date are not all first-class form fields.

Issues With Examples

1. Project Stage

Issue	Stage values are inconsistent and misspelled. This will create duplicate/incorrect stages unless normalized.
Example	CF-BPL CP-2..v3.xlsx: Project "Brooklyn Public Library - CP2" has Stage = "Submitals". CF- PS 512Q..v3.xlsx has Stage blank.
Client should add/fix	Use a fixed dropdown list: ONBOARDING, SUBMITTALS, FABRICATION, INSTALLATION, CLOSEOUT.
Developer should add/support	Frontend already has stage selection, but import must normalize/validate misspellings before creating stage records.

2. Project Dates

Issue	Some projects are missing start/end dates. The frontend also has actual start/completion fields, but those values are not currently included in create/update payloads.
Example	CF- PS 512Q..v3.xlsx: P.S. 512Q has Start_Date blank and End_Date blank. Frontend project form shows Actual Start Date and Actual Completion Date fields, but submit payload omits them.
Client should add/fix	Make project Start Date and End Date mandatory or explicitly mark as TBD. Add actual dates in Excel only if the client wants real dates tracked separately.
Developer should add/support	Wire actualStartDate and actualCompletionDate through frontend schema, payload, backend, and project overview display.

3. Project Division

Issue	The frontend project form requires Division, but the division hook currently loads GC_TYPE lookups, not a project division lookup.
Example	Frontend file src/modules/project/hooks/lookup.hooks.ts: useDivisionsQuery() calls useLookupsQuery("GC_TYPE").
Client should add/fix	Confirm the valid division list to use in Excel, for example SCA, DDC, CIVIL, INSTITUTIONAL.
Developer should add/support	Add/use a PROJECT_DIVISION lookup in frontend/backend instead of GC_TYPE for project division.

4. Prime Contract vs GC Contacts

Issue	Prime contract rows are mixed with GC contact-only rows. Contract fields are blank in contact-only rows.
Example	CF-CREEDMOORE 2..v3.xlsx: Ana Hermsdorf is listed with email/phone, but Contract_ID, Original_Contract_Value, Start_Date, End_Date, and document links are blank.
Client should add/fix	Separate contract data and GC contact data into different sheets or add a Row Type column: Contract / Contact.
Developer should add/support	Support multiple GC contacts per project/contract and import them separately from prime contract records.

5. RFQ Required Fields

Issue	Excel RFQs do not provide every field the frontend requires to create an RFQ.
Example	Frontend RFQ form requires Title, Description, Track/Type, Bid Deadline, and at least one Deliverable. Excel RFQ sheet has RFQ_ID, Title, Vendor, Status, Final_Amount, Issued Date; it does not provide Description, Track/Type, or Bid Deadline.
Client should add/fix	Add RFQ Description, RFQ Type/Track, and Bid Deadline to the Excel template.
Developer should add/support	Add an import-friendly RFQ mapping/validation flow. Do not silently invent required fields without a warning.

6. RFQ Header Data

Issue	RFQs exist, but status, final amount, and issued date are often blank. Frontend does not currently expose issued date as a normal RFQ form field.
Example	CF-CREEDMOORE 2..v3.xlsx: RFQ-2025-1562 has Vendor = Parksite, but Status, Final_Amount, and Issued Date are blank.
Client should add/fix	Complete RFQ Status, Issued Date, Bid Deadline, Final Amount, and Awarded Vendor where applicable.
Developer should add/support	Add/support RFQ issued date, imported status, final amount, awarded vendor/amount, and clear RFQ status mapping.

7. RFQ Vendor Values

Issue	Some RFQs use vague vendor values such as "Multiple", which cannot identify actual vendors or quotes.
Example	CF- TURKISH AIR..v3.xlsx: RFQ-2025-1644 has Vendor = "Multiple".
Client should add/fix	Use one vendor per row or provide a separate RFQ Vendor Quotes sheet with RFQ ID, Vendor, Quote Amount, Quote Date, Lead Time, Attachments, and Awarded flag.
Developer should add/support	Frontend supports RFQ invites/quotes and award flow; add import support for multiple vendor quotes from Excel.

8. RFQ Line Items

Issue	Excel has RFQ Unit_Price, but the current RFQ form hides unit price for deliverables. Cost code can exist in frontend schemas, but the form hides cost code for RFQ deliverables.
Example	RFQ_LINE_ITEMS has Unit_Price, but RFQ form LineItems uses hideUnitPrice and hideCostCode.
Client should add/fix	Clarify whether RFQ line item price is an estimated budget, vendor quote price, or final awarded price.
Developer should add/support	Expose/import RFQ deliverable estimated unit price and cost code if the client expects these values to be visible/reportable.

9. RFQ Attachments

Issue	Attachment rows exist but many have no document name or document link, so no file can be imported. Frontend does support RFQ attachments when files exist.
Example	CF-CREEDMOORE 2..v3.xlsx: RFQ-2025-1562 attachment row has Document_Name blank and Document_Link blank.
Client should add/fix	Every attachment row must include Document Name and a downloadable Document Link.
Developer should add/support	Keep RFQ attachment UI; add import validation for missing attachment URLs.

10. Purchase Orders

Issue	PO rows contain useful fields, but tax rate, document link, payment terms, and sometimes full row data are missing. Frontend supports linked RFQ, tax, payment terms, attachments, line items, and expected date.
Example	CF-BKLYN ANIMAL..v3.xlsx: PO 23108 has Tax_Rate blank and Document_Link blank. CF- PS 512Q..v3.xlsx has a blank PO row with PO_ID, Vendor, and PO_Amount missing.
Client should add/fix	Make PO ID, Vendor, PO Amount, Status, Issue Date, Trade, Tax Rate, Payment Terms, and Document Link required where applicable.
Developer should add/support	Frontend already has linked RFQ and backup documents. Add/import Issue Date, Created By, and initial Status handling if those Excel fields need to be preserved exactly.

11. PO Line Items

Issue	Line items are present, but many units are blank and some quantity/unit price values are missing. Frontend PO line items require unit and cost code.
Example	CF-BKLYN ANIMAL..v3.xlsx: PO 23108 line item "Fabrication of Shop DWGs" has Unit blank. CF-EASTERN LIBRARY..v3.xlsx: PO 26054 line item has Qty, Unit, Unit_Price, and Price blank.
Client should add/fix	Complete Quantity, Unit, Unit Price, Price, and add Cost Code if PO creation/import should pass app validation.
Developer should add/support	Add a Cost Code column to the Excel template or make import able to flag/default missing cost codes with user confirmation.

12. PO Payments vs Invoice UI

Issue	Excel payments are simple check/payment rows, while the frontend invoice module expects full invoice records.
Example	Excel PO_PAYMENTS has PO_ID, Date, CHK#, Note, Amount. Frontend invoice create schema requires Invoice Number, Invoice Date, Due Date, Total Amount, Tax Amount, Tax Rate, related SCO IDs, and Attachments.
Client should add/fix	Add Invoice Number, Invoice Date, Due Date, Payment Method, Payment Attachment Link, Tax Rate/Amount, and optionally Related SCO IDs.
Developer should add/support	Either add a simple PO payment import flow or map Excel payment rows into invoices with clear generated invoice numbers and validation warnings.

13. Prime Change Orders

Issue	Prime COs and line items are present in Excel, but frontend Prime CO module is Fieldwire/list/sync-oriented and has no normal create/edit form for Excel-style manual COs.
Example	CF-BPL CP-2..v3.xlsx: CO 30400-0001 has Description and Amount, but Name, Reason, Creator, Assignee, and Document_Link are blank. Frontend Prime CO schema requires Fieldwire identifiers and revision/sync fields.
Client should add/fix	Complete CO ID, Name, Description, Status, Amount, Reason, Schedule Impact Days, Markup %, Creator, Assignee, Due Date, Approval Date, and Document Link.
Developer should add/support	Add manual/imported Prime CO support, Prime CO attachments, and a Prime CO line-item UI/model if line item reporting is required.

14. PO Change Orders / SCOs

Issue	PO CO rows are present, but some statuses and approval dates are blank, and document links are missing. Frontend SCO form supports date/title/description/change type/line items/attachments, but not all Excel columns as first-class fields.
Example	CF-EASTERN LIBRARY..v3.xlsx: PO_CO_ID 25783-01 has Status blank, Approval_Date blank, and Document_Link blank. Frontend SCO form does not include separate Reason, Schedule Impact Days, Markup %, Creator, Assignee, Due Date, or Approval Date inputs.
Client should add/fix	Use fixed statuses: DRAFT, APPROVED, REJECTED, VOID. Complete due date, approval date, amount, and document link.
Developer should add/support	Add/support SCO reason, schedule impact days, markup percent, creator, assignee, due date, approval date, imported status, attachments, and cost-coded line items.

What Client Should Add/Fix in Excel

- Use fixed dropdown/status values for Project Stage, RFQ Status, PO Status, Prime CO Status, and PO CO/SCO Status.
- Add missing frontend-required fields to Excel: Project Description, TCO Date, RFQ Description, RFQ Type/Track, RFQ Bid Deadline, PO/SCO Cost Codes, Invoice Number, Invoice Date, and Due Date.
- Separate GC contacts from Prime Contract rows, or add Row Type so contacts are not mixed with contracts.
- Make IDs mandatory: Project Number, Contract ID, RFQ ID, PO ID, Prime CO ID, PO CO ID.
- Complete all required dates: project start/end, RFQ issued/bid deadline, PO issue/expected/delivery, invoice/payment date, CO due/approval dates.
- Provide real downloadable document links for every attachment row.
- Avoid vague vendor values like Multiple. Use one vendor per row or a vendor quotes sheet.
- Complete Quantity, Unit, Unit Price, and Price for all RFQ/PO/CO line items.
- Add Invoice Number, Payment Method, and Payment Attachment Link to payment data.

What Developer Should Add/Support in App

- Project: wire actualStartDate and actualCompletionDate through frontend payload/backend; fix division lookup from GC_TYPE to PROJECT_DIVISION.
- Project import: handle Excel missing Project Description and TCO Date with validation rather than silent defaults.
- GC/Contacts: import multiple GC contacts separately from prime contract rows.
- RFQ: add/import issued date, imported status, final amount, awarded vendor/amount, multi-vendor quotes, RFQ attachments, and RFQ-to-PO display.
- RFQ form/import: support RFQ deliverable estimated unit price and cost code if Excel values are expected to be preserved.
- PO: preserve linked RFQ, backup documents, issue date, created by, initial status, tax/payment terms, and line item cost code validation.
- Payments/Invoices: either add a simple payment import flow or map payments to invoices with generated invoice numbers plus warnings; support payment method and payment attachments.
- Prime CO: add manual/imported Prime Change Order support independent of Fieldwire-only sync data, including attachments and line items.
- SCO: add first-class fields/import support for reason, schedule impact days, markup percent, creator, assignee, due date, approval date, imported status, attachments, and cost-coded line items.
- Importer: generate a validation report before import showing missing mandatory fields and invalid dropdown values by workbook/sheet/row.

Recommended Client Message

The Excel files contain the right categories of project data, but several required values are missing or inconsistent. After checking the frontend, some Excel columns also do not map cleanly to current screens, especially Prime Change Orders, RFQ issued/final values, payment rows, and SCO schedule/markup metadata. Before final import, we need standardized dropdown values, complete IDs/dates/amounts, separate contact rows, and real document links for attachment rows.
